

RESOURCE[®] COMMANDER

Datasheet: Dexter + Chaney Forefront Payroll Adaptor

ACS Connect provides resource tracking capabilities to customers of Dexter + Chaney's Forefront Construction Software. Resource Commander has been fully integrated with Forefront, allowing employee time to be tracked remotely, costed, validated and finally fed directly into the Payroll module. Time can be fully distributed within Resource Commander while at the same time validated directly against Forefront, eliminating costly mistakes. Additionally, this integration eliminates the time intensive re-keying of payroll data.

Feature Summary

- Employee Resources are populated automatically within Resource Commander from the Forefront Payroll module.
- During time entry, all job costing validations are provided to the user directly from Forefront, eliminating potential costing errors.
- A second validation hierarchy is also provided, and can optionally be configured to provide human resources organizational units like department.
- Pay rates and union codes may also be provided to the user directly from the Forefront Payroll module.
- Separate permissions are provided for personal entry, group entry, approvals, reporting and upload. Administrators can configure permissions to be allowed in any combination to the desired roles.
- Records can be selectively uploaded as a Payroll Batch to the Forefront Payroll module, prepared for an edit to be run.

System Requirements

Server components of Resource Commander require the following minimum specifications:

- Processor: 1.5 GHz Pentium 4 or faster
- Memory: 2GB RAM
- Operating System: Microsoft Windows Server 2003
- Database: Microsoft SQL Server 2005 or SQL Server 2005 Express
- Other: Internet Information Services (IIS) 6 or 7

NOTE: While it is possible to install database and IIS on a single server, it is recommended that these components are each installed on a dedicated server.
