

10 Great Reasons to Consider Resource Commander for Your Organization

There are many reasons, but here are some of the most important:

1. With Resource Commander, ACS Connect has already invested heavily in difficult development challenges, such as online/offline synchronization, device independent mobile applications, and user interface optimizations required to effectively display company/division/job/phase/costcode combinations that frequently number in the millions.
2. Ten years of real world use in organizations with thousands of users, has resulted in a refined enterprise-level application offering stability and performance that cannot be replicated quickly or easily.
3. Resource Commander has extensive configurability built into it, which means that as needs evolve, the software easily adapts to new and changed processes, rather than requiring expensive code rewrites.
4. A permission framework that includes both robust and flexible controls for who has access to sensitive information.
5. In addition to having over 20 years experience integrating data between systems, ACS Connect partners directly with your other software vendors to ensure that adaptors meet the highest standards for quality and work seamlessly.
6. Resource Commander has existing payroll and equipment adaptors for most Accounting/ERP systems used by construction companies.
7. As new Resource Commander version are released, updated adaptors are included in the software subscription component of our maintenance plans.
8. Resource Commander has a built-in framework of web services that allow it to be efficiently integrated with other 3rd party applications such as Prolog for project management and national equipment telematics (GPS) providers.
9. Resource Commander and the required payroll adaptors are available for implementation immediately, as compared to a custom development schedule that is difficult to predict and even more difficult to meet.
10. The ACS Connect team has a track record of planning and completing complex implementations on time and on budget.
